

# Cooper Building Designer

My journey to become a Building Designer is a little unusual. I had always worked in construction and thought that's where I'd stay, however after many years of broken bones and other sporting injuries, that just wasn't going to be a long-term option. I've always loved the industry, and so I decided to try my hand at the design side of things.

As often happens, not being able to continue in construction turned out to be a blessing in disguise because I absolutely love what I do - and it turns out I'm great at it (if I do say so myself 😊).

Even better, having a construction background gives me a real advantage when it comes to creating your project. I don't just draw 6 circles and hope they come together, I actually understand the practical application and can take that into consideration right from the start. This can save you money and time, not to mention a lot of headaches over the long-term.

I have an Advanced Diploma in Building Design (Architectural) which means I have the education and skills to create a professional design for you that looks fantastic and is also practical and functional.

The thing I love most about what I do is making your ideas come to life. Because I have such a deep understanding of the building industry, I can work with you to create a vision that you'll love and just as importantly, will meet the rules and regulations for your build. And because I have such a love for the building industry, I'm passionate about seeing the end result once it's actually built.

I'm a very social person and spend a lot of time with family and friends. I'm all about making the most out of life. This tends to come across in my work because I'm always looking for fresh ideas and ways to make things work even better for you. At the same time I love hearing your ideas and what inspires you, so we can work that into the design as well. Communication is really important to me throughout the process, as it can be stressful, so I like to keep you informed as much as possible.

I'm looking forward to seeing what our partnership can achieve for your project.
